## Description

### APPLICATIONS

Easy to use, electromechanical limit switches offer specific qualities:

- Visible operation.
- Able to switch strong currents (10 A conventional thermal current).
- Electrically separated contacts.
- Precise operating points (consistency).
- Immune to electromagnetic disturbances.

They are purpose-built detection devices thanks to these characteristics:

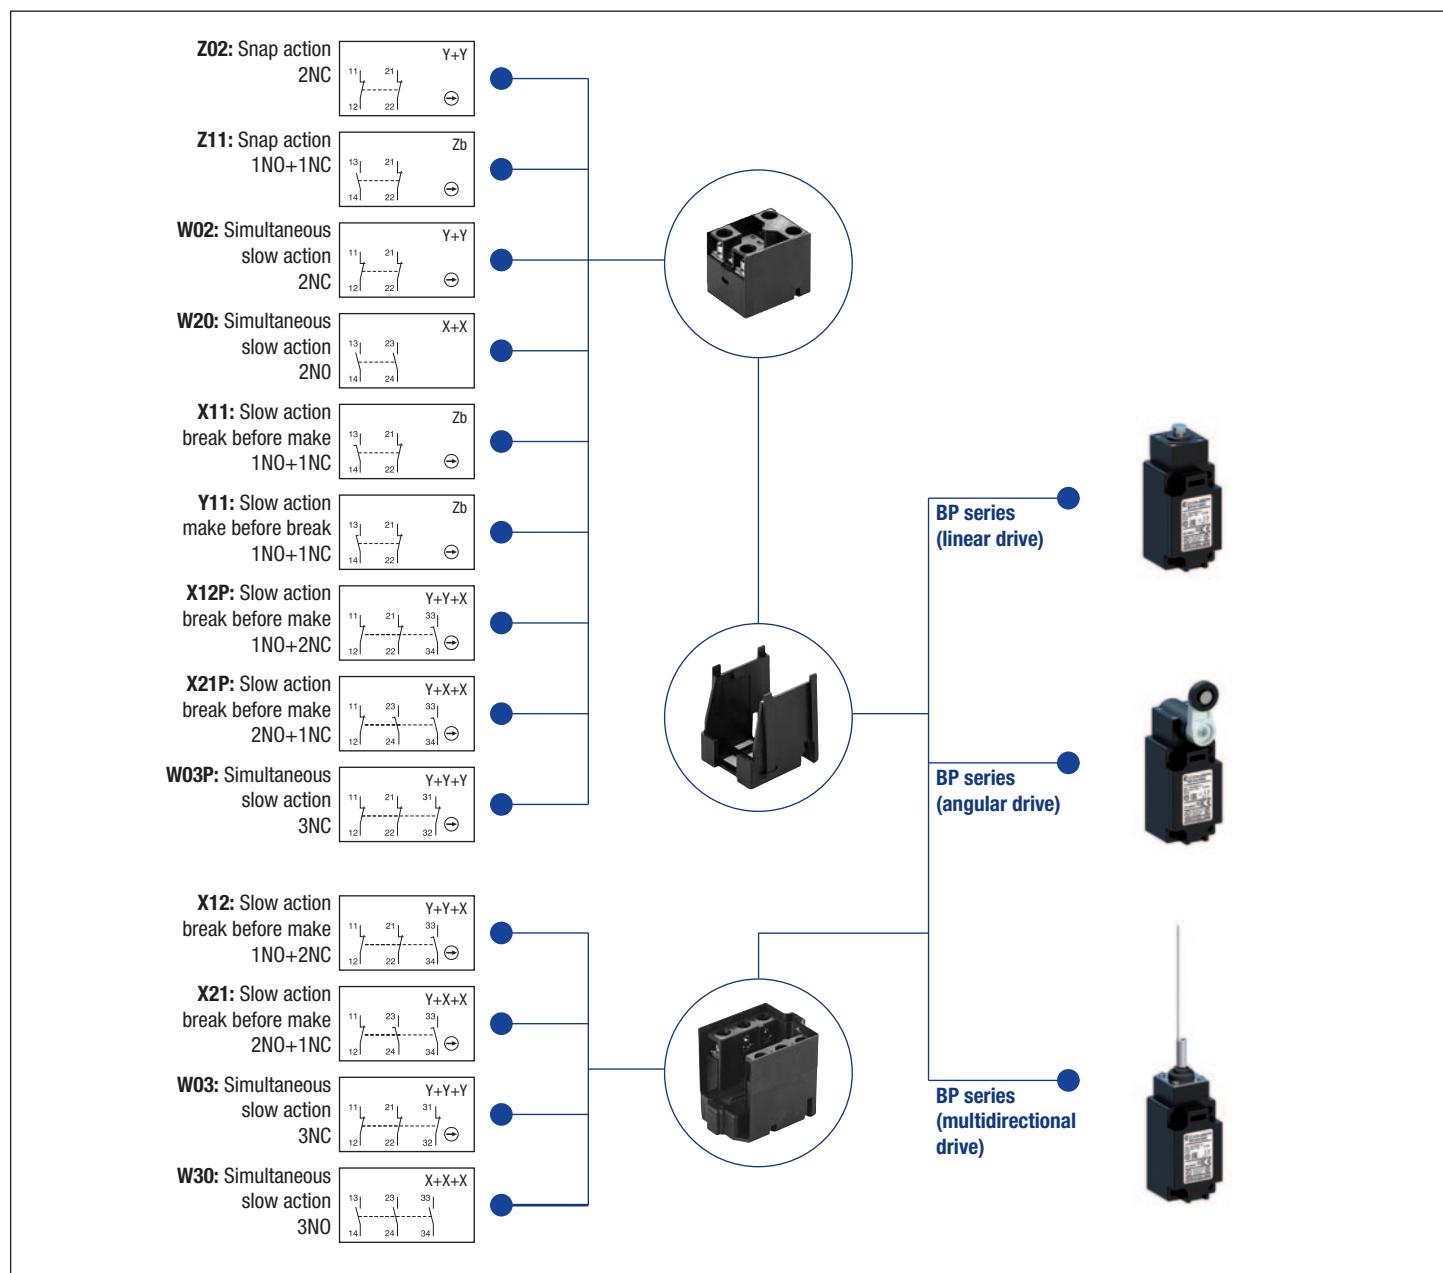

- Presence/absence.
- Positioning and travel limit.
- Objects passing/counting.

### DESCRIPTION

Limit switches, which are made of reinforced UL-VO thermoplastic fiber-glass, offer double insulation  and a degree of protection of IP65.

They comply with the requirements of European Directives (Low Voltage and RoHS) and are conform to European and International Standards.

### IMPLEMENTATION

#### Operating head orientation

The head can be rotated each 90°.

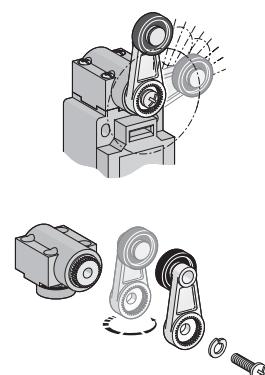

Recommended tightening torque 0,5 Nm (max 0,8 Nm).

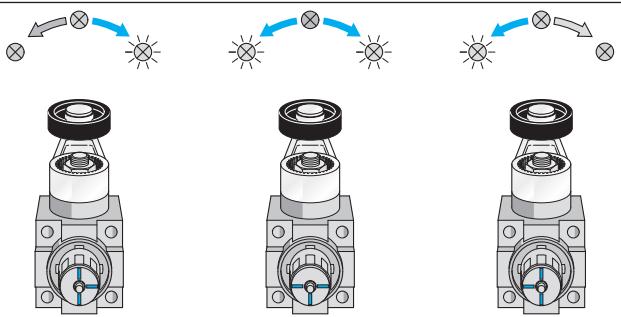

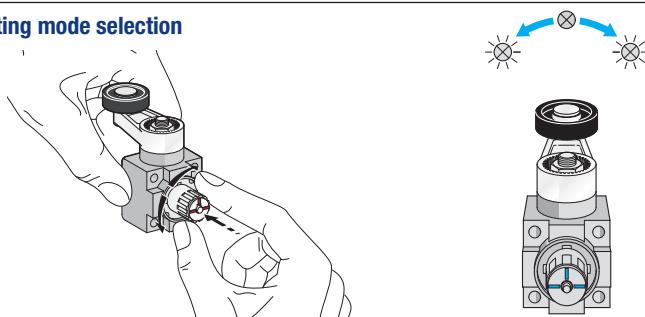

#### Lever adjustment

The lever of the angular actuators can be adjusted every 9° and round turned in order to obtain the maximum flexibility on the working plan.

Recommended tightening torque 0,5 Nm (max 0,8 Nm).

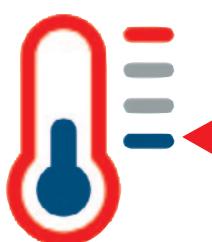

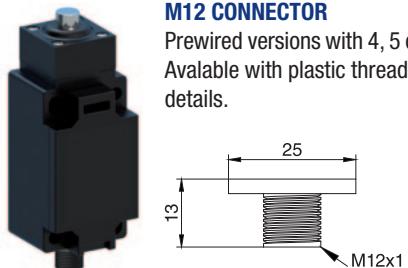

#### Operating mode selection

### Special Versions

#### M12 CONNECTOR

Prewired versions with 4, 5 or 8 poles M12 male connectors. Available with plastic threaded body. See page 117 for more details.

#### Low Temperature

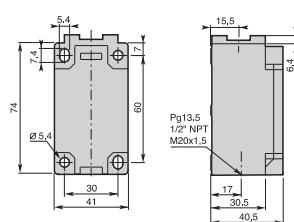

The limit switches for low temperature applications are useful for refrigerated cells or equipments where the air operational temperature is very low. These devices, made in special materials, are able to extend the operational temperature range down to -40°C, maintaining mechanical performances intact. To order add the digits "40" following the operating head indication in part number. For example: BP1H11Z11 → BP1H1140Z11
